Technical description

The LGW...A1 is a factory-adjusted differential pressure switch as per EN 1854.

- The LGW...A1 is suitable for switching a circuit on, off or over on changes in actual pressure value relative to the reference value set at the factory (reference value).
- Precise function by special switching system mounted in frictionless bearings.
- Electrical connection by means of a flat-type connector.
- Compact size.

Application

Differential pressure monitoring in firing, ventilation and air-conditioning systems. The LGW...A1 can be used as a pressure, vacuum or differential pressure switch for air and non-aggressive gases but not for industrial combustion gases.

Approvals

- EC type testing certificate as per:
- EC-Gas Appliances Regulation
 - EC-Pressure Equipment Directive

Approvals in other important gas-consuming countries. Special designs for the North American market with UL, FM and CSA registrations.

Functional description

Differential pressure switch in pressure and vacuum ranges.

The differential pressure acts via the diaphragm against the force of the setting spring on the microswitch. The pressure switch operates without any auxiliary power.

LGW...A1 differential pressure switch

The control unit responds to differential pressure. If the set reference value is exceeded or undershot, the circuit is switched on, off or over.

Definition of switching difference Δp

The switching difference Δp is the pressure difference between the upper and lower switching pressures.

LGW...A1 switching function

As pressure rises:

1 NC opens, 2 NO closes

As pressure falls:

1 NC closes, 2 NO opens
