

VS26 series, 2 x 2/2, 2 x 3/2, 5/2 or 5/3 ISO valve islands

- Modular system offering a wide range of configuration options conforming to ISO 15407-2, Size 26 mm
- 24 V d.c. or 115 V a.c. Multipole and single station sub-base
- Integrated Fieldbus, Industrial Ethernet and IO-Link
- Fieldbus expandable with single add-on stations, Industrial Ethernet and IO-Link expandable with double add-on stations.
- Wide range of accessories including shut off valves enabling non-stop operation
- Dual spool technology
 - Glandless spool and sleeve for long life
 - Softseal spool for high flow
- Up to 40 solenoids, operating at 16 bar pressure
- UL and ATEX

Technical features

Medium:

Compressed air, filtered to 40 µm, lubricated or non-lubricated

Operation:

VS26G: Glandless spool valve, solenoid pilot actuated
VS26S: Softseal spool valve, solenoid pilot actuated

Flow:

Function	l/min	Cv	Kv
2 x 2/2	1150	1,17	1,00
2 x 3/2	1250	1,27	1,09
5/2; 5/3	1350	1,37	1,18
Glandless			
5/2; 5/3	1000	1,02	0,87

Mounting:

Sub-base

Ports 2+4:

G1/4, NPTF 1/4, PIF 10 mm,
PIF 8 mm, PIF 3/8

Operating pressure:

Maximum pressure
10 bar (145 psi) VS26S models and VS26G solenoid pilot actuated valves with internal pilot supply 16 bar (232 psi)
VS26G solenoid pilot actuated valves with external pilot supply. Details of minimum and maximum pilot pressure see overleaf

Media/Ambient temperature:

-15 ... +50°C (+5 ... 122°F) (Ambient)
-5 ... +50°C (+23 ... 122°F) (Media)
Air supply must be dry enough to avoid ice formation at temperatures below +2°C (+35°F).

Materials:

Body/sub-base: die-cast aluminium
Glandless spool & sleeve (VS26G): aluminium, hard anodised, PTFE coated
Softseal spool (VS26S): aluminium with HNBR seals
Plastic parts: POM, PA, PPA
Mounting sheets/screws: steel, zinc coated
Springs: stainless steel
Sandwich plates: aluminium bar material, PA
Electrical contacts: brass, tin gold coated
PCB: glass epoxy

Protection classification (IP Code):

All VS26 valve islands fulfill IP65 and NEMA4 ratings.

Power supply and precautions:

All VS26 24 V d.c. products are designed to be used with a protective extra low voltage (PELV) power supply. All VS26 115 V a.c. products correspond to the protection class I. Connection of the protective earth (PE) ground is required.

UL approval:

Recognized to UL 429 for Electrically Operated Valves (not applicable for Industrial Ethernet, IO-Link and Fieldbus options).

ATEX:

The 24 V d.c. valve islands fulfils the requirement of the standard 2014/34/EU for intended use in hazardous locations.

Multipole and Industrial Ethernet versions:
II 3G Ex ec IIC T4 Gc
II 3D Ex tc IIIC T135°C Dc

IO-Link
II 3G Ex ec IIC T4 Gc
II 3D Ex tc IIIB T135°C Dc

Fieldbus versions:
II 3G Ex ec IIC T4 Gc
II 3D Ex tc IIIB T135°C Dc

Equipment group, category, type of protection:

The Declaration of Conformity of the valve island was conducted by IMI International s.r.o. Please review all ATEX data and notes in the maintenance and instruction booklet to eliminate any risk, allowing for sage function of the valve island.

Note:

Please refer to the corresponding ATEX installation instructions and the maximum permissible operating conditions for valve islands in the ATES zone.

The maximum allowed power consumption for ATES is 20W.

This corresponds to 16 simultaneously energized pilot valves. If a configuration consists of more than 16 pilot valves the user must undertake external actions. (e.g. power-limited power supplies) to make sure that the power consumption of 20W is not exceeded.

This does not apply to IO-Link versions. Up to 40 pilot valves can be separated at IO-Link versions.

Warning

These products are intended for use in industrial compressed air systems only. Do not use these products where pressures and temperatures can exceed those listed under »Technical features/data«.

Before using these products with fluids other than those specified, for non-industrial applications, life-support systems or other applications not within published specifications, consult IMI Precision Engineering.

Through misuse, age, or malfunction, components used in fluid power systems can fail in various modes.

The system designer is warned to consider the failure modes of all component parts used in fluid power systems and to provide adequate

safeguards to prevent personal injury or damage to equipment in the event of such failure.

System designers must provide a warning to end users in the system instructional manual if protection against a failure mode cannot be adequately provided.

System designers and end users are cautioned to review specific warnings found in instruction sheets packed and shipped with these products.
