

## Absolute encoders ARS60 SSI/Parallel

ARS60-H1A04096

**Model Name** > [ARS60-H1A04096](#)  
**Part No.** > [1031699](#)

*Illustration may differ*

#### At a glance

- Absolute singleturn encoder
- Resolution: up to 15 bits (32,768 increments)
- Electrical interface: SSI with gray code type or gray capped
- Electrical interface: Parallel with gray, gray capped, binary, BCD code type
- Zero-set function
- Mechanical interfaces: face mount flange, servo flange, blind and through hollow shaft
- Enclosure rating: Up to IP66

#### Your benefits

- Optical and magnetic variants for the widest range of requirements
- Reduced maintenance costs thanks to magnetic, wearless scanning in single and multiturn design
- High level of productivity due to optical encoders with a high level of precision and fast calculation of positions
- Robust design for maximum system availability, even in extreme environmental conditions
- Absolutely compact - specially suited in cases where installation space is tight
- Flexible integration in all common networks

#### Performance

|                                      |                                                                          |
|--------------------------------------|--------------------------------------------------------------------------|
| Max. number of steps per revolution: | 4,096                                                                    |
| Max. number of revolutions:          | 1                                                                        |
| Resolution power:                    | 4,096 x 1                                                                |
| Error limits:                        | 0.035 ° (binary number of steps)<br>0.046 ° (non-binary number of steps) |
| Repeatability (Ta not constant):     | 0.005 °                                                                  |
| Measuring step deviation:            | 0.005 °, 0.016 °                                                         |
| Measuring step:                      | 360 ° /number of lines                                                   |
| Initialization time:                 | 80 ms <sup>1)</sup>                                                      |

<sup>1)</sup> Valid positional data can be read once this time has elapsed

#### Mechanical data

|                       |                           |
|-----------------------|---------------------------|
| Mechanical interface: | Solid shaft, Servo flange |
| Shaft diameter:       | 6 mm                      |
| Mass:                 | 0.3 kg                    |

|                                     |                                                                              |
|-------------------------------------|------------------------------------------------------------------------------|
| Start up torque:                    | 0.25 Ncm                                                                     |
| Operating torque:                   | 0.2 Ncm                                                                      |
| Permissible Load capacity of shaft: | 10 N (axial), 20 N (radial)                                                  |
| Maximum operating speed:            | 10,000 /min (without shaft seal), 6,000 /min (with shaft seal) <sup>1)</sup> |
| Moment of inertia of the rotor:     | 48 gcm <sup>2</sup>                                                          |
| Bearing lifetime:                   | 3.6 x 10 <sup>9</sup> revolutions                                            |
| Max. angular acceleration:          | 500,000 rad/s <sup>2</sup>                                                   |
| Operation of zero-set:              | ≥ 100 ms <sup>2)</sup>                                                       |

<sup>1)</sup> If the shaft seal has been removed by the customer <sup>2)</sup> Only with shaft stationary (note initialisation time)

## Electrical data

---

|                                        |                                      |
|----------------------------------------|--------------------------------------|
| Operating voltage range:               | 10 V DC ... 32 V DC                  |
| Operating power consumption (no load): | 90 mA                                |
| MTTFd: mean time to dangerous failure: | 300 a (EN ISO 13849-1) <sup>1)</sup> |

<sup>1)</sup> This product is a standard product and does not constitute a safety component as defined in the Machinery Directive.

Calculation based on nominal load of components, average ambient temperature 40°C, frequency of use 8760 h/a. All

electronic failures are considered hazardous. For more information, see document no. 8015532.

## Interfaces

---

|                       |                               |
|-----------------------|-------------------------------|
| Electrical interface: | Connector M23, 21-pin, radial |
|-----------------------|-------------------------------|

## Ambient data

---

|                                |                                                              |
|--------------------------------|--------------------------------------------------------------|
| EMC:                           | (according to EN 61000-6-2 and EN 61000-6-3) <sup>1)</sup>   |
| Enclosure rating:              | IP 65 (according to IEC 60529), with mating connector fitted |
| Permissible relative humidity: | 90 % (condensation of the optical scanning not permitted)    |
| Working temperature range:     | -20 °C ... 85 °C                                             |
| Storage temperature range:     | -40 °C ... 100 °C                                            |
| Resistance to shocks:          | 50 g (according to EN 60068-2-27)                            |
| Resistance to vibration:       | 20 g, 10 Hz ... 2,000 Hz (according to EN 60068-2-6)         |

<sup>1)</sup>

**M8 x 60-2A**

Technical drawing showing dimensions and tolerances for the M8 x 60-2A ball joint socket head screw.

**Dimensions and Tolerances:**

- Head diameter:  $\varnothing 42 \pm 0.1$  (1.65)
- Head height: M4 8 deep (0.31)
- Head width across flats: 120°
- Chamfer angle: 25°
- Shank diameter:  $\varnothing 60$  (2.36)
- Shank length: 20 (0.79)
- Ball joint end diameter:  $\varnothing 59.5 \pm 0.1$  (2.34)
- Ball joint end inner diameter:  $\varnothing 58$  (2.28)
- Ball joint end outer diameter:  $\varnothing 51.5 \pm 0.1$  (2.03)
- Ball joint end thread:  $\varnothing 50$  f6 (1.97) /  $\varnothing 50$  f6 (0.24)
- Ball joint end length: 4 (0.16)
- Ball joint end width: 3 (0.12)
- Ball joint end diameter:  $\varnothing 6$  f6 (0.24)
- Ball joint end length: 10 ± 1 (0.39)
- Ball joint end diameter:  $\varnothing 8$  (0.31)
- Ball joint end length: 24 (0.94)
- Ball joint end diameter:  $\varnothing 13.5$  (0.53)
- Ball joint end length: 3 (0.12)
- Ball joint end diameter:  $\varnothing 4.5$  (0.18)
- Ball joint end length: 66 (2.60)
- Ball joint end diameter:  $\varnothing 90$  (3.54)
- Ball joint end length: 90 (3.54)
- Ball joint end diameter:  $\varnothing 54 \pm 0.5$  (2.13)
- Ball joint end length: 4.5 (0.18)

- Allocation for encoder with 21-pin connector Single; Parallel Interface

| PIN     | Wire color/y cable outlet | Binary              | Gray                | BCD                              | Description |

<sup>2</sup> Set line only possible with a cable outlet.

U<sub>5</sub> Supply voltage to the encoder (before commissioning, note must be taken of the type label of the encoder).

**GND** Zero volt connection to the encoder: electrically isolated from the housing. The voltage referred to GND is  $U_e$ .

**V/R<sub>+</sub>** Forward/reverse: this input programs the counting direction of the encoder. If not connected, this input is -high-. If the encoder shaft, as viewed on the drive shaft, rotates in the clockwise direction, it counts in an increasing sequence; if it should count upwards when the shaft rotates in the anti-clockwise direction, this connection must be connected permanently to +low-level (zero volts).

**Enable\_** This input activates the data output driver when a *-low-* level is applied. If not connected, this input is *-low-*. In the case of a *-high-* level, the outputs are in the tri-state mode.

**Store<sub>in</sub>** This input stores the encoder data in Gray code when a slow level is applied. This avoids a read error if the output data is requested in binary code. If this input is low, the data at the encoder output is stable, irrespective of whether the input shaft rotates. If not enabled, this input is high.

**Parity** This output supplies a -high- level when the binary checksum of the data bits is even.

**SET** This input serves to set the zero electronically. If the SET line is connected to GND for more than 100 ms, the mechanical position corresponds to the value 0.
