Your benefits

- The identification function of CVS4 will make sure that the produced part is tagged with correct date, time, string or batch number without a complex camera solution
- The "automatic date update" of CVS4 ensures that your reference is always up to date
- The "valid date range" tolerances reduces re-teach time when the correct inspected date is not the present date
- The automatic batch number count-up makes batch number inspection the easiest task
- The "user learn character" support gives you flexibility in character design
- The reference capacity of 16 teach configurations reduces the complexity of your batch production control and will save you cost
- The integrated display provides an easy and economical way to monitor the process
